Dr. Todd Bloomquist

Dr. Todd Bloomquist serves as Senior Program Officer for the Children, Youth, and Family department at The Ford Family Foundation. His work centers around Youth Development and Education, leading the Foundation's work specifically aimed at improving outcomes for children and youth ages 4-18, while also contributing to the Foundation's broader, cross-cutting efforts to strengthen supports for children, youth, and families in rural areas.

Prior to coming to the Foundation, Todd served in K-12 schools for 31 years in a variety of roles from classroom teacher, to building administrator, to various district level director positions. Todd holds a master's degree in English education from Whitworth University and a doctorate in education from George Fox University. Most recently he served in the Grants Pass School District as the Director of School Improvement. He also is an adjunct faculty member for Southern Oregon University, teaching in the administrator licensure program.

Todd is a certified master trainer of Adverse Childhood Experiences (ACEs) and of the Neurosequential Model in Education (NME) and has been working to help educators and practitioners understand the biology of how we adapt to our environments and how that deeper understanding can lead to resilience as we learn, grow, and age. This understanding of neuroscience can lead to increased regulation, self-control, executive function, and learning.
